The malicious program is designed to monitor your system constantly, in order to gain access to your files. It might be a startup keylogger that could intercept all your activities on your system or a keylogger that only makes sense in the case it has been installed to your system. When the ransomware is installed on your computer, it encodes your files with a encryption algorithm named the Dridex cryptocurrency stealer. It then sends your files to servers controlled by the hackers'

infrastructure, where you receive the ransom note. Eset TeslaCrypt Decryptor Review: The program does not come with any instruction guide or usage guide.
